EDUCATION

University of California, Santa Cruz

Santa Cruz, CA

Bachelor of Science in Computer Science – GPA: 4.00

Expected: December 2028

- **Relevant Coursework:** Object Oriented Programming, Software Development, Data Structures and Algorithms

TECHNICAL SKILLS

Languages: Python, Java, C/C++, C#, SQL, JavaScript, TypeScript, Elixir, Bash, HTML/CSS

Frameworks & APIs: FastAPI, Flask, React, Next.js, Node.js, Phoenix LiveView, Pydantic, REST APIs, Twilio SMS

Machine Learning & Data: OpenAI API, LangChain, PyTorch, scikit-learn, pandas, NumPy, LLM Agents

Databases & Platforms: PostgreSQL, MySQL, Supabase, NoSQL, Vercel, AWS, Redis

Developer Tools: Git, Docker, Kubernetes, pytest, Linux

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern

September 2026 – Present

EduSchool

Remote

- Building the course requirement engine that validates degree/diploma course progress and the **full student experience**, including login and authentication, in TypeScript using a PostgreSQL & Redis database structure.
- Working with a team of **6 interns** using Kanban and Jira, shipping **20+** major feature releases in **3 weeks** through a **CI/CD** pipeline, creating valuable features for educational roster & grade management.

Software Engineer Intern

June 2026 – August 2026

InstaService

San Jose, CA

- Developed a real-time **operations control dashboard** with Elixir, Phoenix LiveView, and GenServer, consolidating manual booking controls and agent actions into one interface for the operations team.
- Built **3 specialized agents** (risk detection, provider tracking, chat monitoring) evaluating every booking in parallel, integrating Home Depot and Lowe's APIs in Python to cut operations workflow time by **70%**.
- Automated escalation of risky bookings with LangChain messaging agents and Twilio SMS, calls, and email alerts, resolving up to **90%** of booking issues without staff intervention and speeding response times by **40%**.
- Led a **3-engineer team** as product lead, owning the roadmap and technical specs in Jira, and wrote **216 pytest** unit tests reaching **90%+ coverage**.

Undergraduate Research Assistant

April 2026 – Present

University of California, Santa Cruz (Advisor: Prof. Jim Whitehead)

Santa Cruz, CA

- Cut jump-trajectory error by **2 tiles** by replacing a kinematics model with a frame-by-frame physics solver.
- Built a Wave Function Collapse map generator in TypeScript with adjacency constraints ensuring valid layouts.
- Shipped **8 reviewed pull requests** implementing a deterministic reachability engine, jump solver, and LLM tool-contract fixes for an platformer co-creative system editor.
- Synthesized **20+ research papers** on PCG, artificial intelligence, and co-creative machine learning systems, informing the design of the platformer co-creative editor and guiding development decisions with current research.

PROJECTS

ScorelyAI – AI Report Grading Platform | FastAPI, PostgreSQL, Next.js, OpenAI API February 2026

- Reached **30+ active users** in the first month and partnered with a high school for a **150+ student** rollout in 2027.
- Graded **100+ reports** in **under 20s each**, cutting grading time **5x** within **2.8 points** of human scores.
- Built an async FastAPI/PostgreSQL pipeline with Pydantic-validated GPT-4o outputs and computer vision checks, delivering section-level feedback for **16+ event types** at **99.4%** visual error accuracy.

Portfolio Website | Next.js, TypeScript, shadcn, Tailwind CSS

September 2026

- Built a custom animation system on top of shadcn components, including a spring-physics cursor spotlight, hover and click animations, and a typewriter headline, all without third-party animation libraries.
- Designed a data-driven architecture that statically generates **7 case-study pages** from a single source file, so adding a project updates the whole site automatically, ensuring sustainability for future experiences & projects.
